

IT Security Policy

1. Company-Issued Devices

All employees are issued a company laptop upon starting, which remains company property at all times. Laptops must run the IT-managed security agent and receive operating system updates within 7 days of release. Personal laptops may not be used to access internal systems.

2. Password Requirements

All company accounts require passwords of at least 14 characters with a mix of upper and lower case letters, numbers, and symbols. Passwords must be rotated every 180 days. Multi-factor authentication is mandatory for all systems containing customer data.

3. VPN and Network Access

Employees must connect through the company VPN when accessing internal systems from outside an office network, including when working remotely under the Remote Work Policy. Public Wi-Fi should never be used without the VPN active.

4. Reporting Security Incidents

Any suspected security incident, including lost devices, phishing emails, or unauthorized access, must be reported to the Security team within 1 hour of discovery, using the #security-incidents channel or the emergency security hotline.

5. Mobile Device Management

Personal phones used to access company email or chat must be enrolled in the Mobile Device Management (MDM) system, which allows the Security team to enforce a passcode and remotely wipe company data if the device is lost.
